P R O J E C T S

IPO DEKHO
Online IPO Viewing Platform.

Project Description:- A one stop platform for the people who wants to know about ipo market. In this website a user can know about the listed ipos, upcoming ipos, live ipos, etc. and also get the news of the market and much more.

Created frontend part of the project and added functionalities like CRUD operation, search and filter from the ipos, pagination, etc.

Role:- Worked on Front-end development using React and redux-toolkit

Yfobs (React js)
Online Invoice and Billing Platform.

Project Description:- We created a platform for user where they can create their invoices and manage their business like sending invoices, adding Customers, Vendors and Products, Generate Reports. As well as from reports they can also be able to obtain valuable insights about how their business is going.

Created a admin and a user panel, on the admin side and stored all the details of user on the admin panel like their business details, package subscriptions, etc.

Role:- Worked on Front-end development using React and redux-toolkit

Veganeats App (React js)
Online Organic Vegetables and grocery food ordering and get delivered to your destination.

Project Description:- We provide a platform for the people of a particular one stop destination to buy organic vegetables and groceries. You can have food delivered to your place at any time. We also provide before and after payment of items.

Created frontend part of this project and added some logical functionalities like adding the product to cart, sorting according to price, searching the product, etc

Role:- Worked on Front-end development using React and redux-toolkit
